

WATER TREATMENT CHEMICALS

We offer a complete range of high-quality chemicals tailored to your needs, ensuring maximum efficiency and performance.

COOLING WATER TREATMENT

Chemical Dispersant

Chemical dispersant acts to keep foulants in suspension and prevents them from settling on metal surfaces or helps to remove fouling deposits that have already formed.

Anti-Scalant

It is used to prevent scale formation by keeping the scale forming minerals in solution and not allowing the crystallization process to begin.

Anti-Algae

Control growth of Legionella in cooling system. Legionella is a group of bacteria present in all natural waterways and biofilms.

CHILLER WATER TREATMENT

Corrosion Inhibitors

A fully biodegradable chemical for use in chiller water plant normally cause the severe problems of corrosion.

BOILER WATER TREATMENT

Anti Corrosive And Anti Scalant

Most effective anti-scalant & anti-corrosive chemical for use in boiler plant for benefit of no sludge and scaling formation also protects from corrosion.

Alkalinity Builders/pH Booster

Alkalinity builders are designed specifically to control pH in boiler water systems to ensure that such boiler systems are well maintained and operate at optimum efficiency and correct water conditions are maintained at all times.

Oxygen Scavengers

Oxygen scavengers are scientifically formulated to combat the detrimental effects of oxygen related corrosion in industrial boiler systems, hot water systems, and steam raising plant and so help reduce maintenance costs, maintain boiler efficiency.

Descaling Chemical

A descaling compound which are complete formulation for removing all type of water borne scales deposits, corrosion products and other accumulations from heating and cooling systems such as boilers, condensers, heat exchanger, radiator etc.

DRAINAGE WATER TREATMENT

Drainage Cleaner Drainage Cleanert

Make drainage system eco-friendly & provide full protection for STP and other plant.

STP&ETP WATER TREATMENT

Liquid Flocculant

Brings the de-established colloidal particles together to form large aggregates.

Liquid Cogulant

Neutralize the non-settleable particles & allow them to form clumps.

Liquid Deodorizer

Prevent biological fouling & make odorless water.

Liquid Disinfectant

An Anti-bacterial chemical reduces bacterial problem in waste water.

Defoamer

An anti-foaming agent used in aeration tank to decrease the foaming problems in process.

White Nutrients

It is used to Increase the bacteria growth.

Black Nutrients

It is used to Increase the bacteria growth.

Liquid Bio-chemical

A liquid bio-culture used to develop the bacteria in STP.

AC COIL CLEANER

Carbon Dust Remover

A highly concentrated and effective liquid cleaner and brightener for complete removal of dust, dirt, greasy-oily soils, carbon deposits and grime on the aluminum fins and copper coils.

R.O. WATER TREATMENT

R.O. Anti Scalant

A very effective R.O. anti scalant & dispersant ensures long running times, low operational costs & long lasting life of membranes.

pH Booster

Our pH Booster chemical control pH/alkalinity levels in drinking water helping your systems achieve greater working performance and long service life.

Dechlorination

A chemical additive that removes chlorine or chloramine from water.

Descaling

A descaling compound which are complete formulation for removing all type of water borne scales deposits, corrosion products and other accumulations from heating and cooling systems such as boilers, condensers, heat exchanger, radiator etc.

Water Softening

A very effective water softening chemical used to reduce hardness of water.

HOT WATER TREATMENT

Anti-Scalant

It is used to prevent scale formation associated with silica as well as water hardness.

Corrosion Inhibitors

Our most efficient Corrosion inhibitors are designed to minimize corrosion to hot water.

SWIMMING POOL WATER TREATMENT

Liquid Chlorine

A Concentrate Liquid Chlorine for swimming pool water used to kill certain types of bacteria & algae.

Algaecides

Used as a Disinfectant for swimming pools.

Imported Granule Chlorine

Granules come in a significantly lower concentration which, along with their size, make them easy to dissolve in water.

CONTACT US

Get in touch with us to find the right water treatment solution for your business.
